Citation: Feleke Eriso (2022) Genomic diseases in humans & weapons of universal reactions of matter, *International Journal of Health and Psychology Research*, Vol.10, No.2, pp.19-29

ABSTRACT: *Genomic diseases are caused by structural as well as numerical changes or abnormalities in DNA/s of the **Genome**. The genomic (genetic) abnormality can range from a discrete mutation in a single base (point mutation) of a single gene in a DNA molecule to gross abnormality of whole DNA molecule involving the addition or subtraction of entire DNA or set of DNAs. The key objective of this study is to spectacularly demonstrate the fact that Genome is the only wonderful molecule that synthesizes **itself & all genomic-things** using their nutritive substances as raw materials in their compatible environment. Listing genomic diseases and causative agents including universal reactions of matter as materials & methods and then dealing with them in an interpretive approach in **Results and Discussion** section had been taken to be the best option or procedure of design. Results are very concentratedly displayed together with the causative agents in Results and Discussion section particularly in videos of Figure 1 and Figure 2. **Genome** is the only thing (molecule) that synthesizes all genomic-things & itself. This is why that when the genome becomes an **abnormal genome** due to abnormal changes in it, it synthesizes abnormal individuals, i.e., persons having **genomic diseases**. In other words, abnormal genome synthesizes abnormal individuals whereas the normal genome synthesizes normal individuals as in a controlled experiment. Structural or numerical changes, being unnatural in DNA molecule/s of the human **Genome** result in genomic diseases (disorders). Weaponizing universal reactions of matter and utilizing them in war have been ascertained that it can delete: -humans, all other forms of genomic-things, and science as well as technology we have including economic wealth in cash (that can be burnt just like trash papers in a basket) from the surface of this planet within few hours!!*

KEY WORDS: abnormality, genomic disease, disorder, DNA, gene, weaponizing, genome

INTRODUCTION

Genomic diseases are caused by a change or changes in DNA molecules of the **Genome**. Genomic diseases are a set of genetic diseases caused by unnatural changes in the genetic makeup (genes) found in genome of an individual. The genetic change can range from a discrete (separate) mutation in a single base (point mutation) of a single gene in a DNA molecule to a gross change of whole DNA molecule involving the addition or subtraction of entire DNA or set of DNAs. In other words, the genetic change can range from a minuscule (very small) to a major size of change.

Some people inherit genetic disorders (diseases) from their parents while others may acquire changes, disorders, or mutations in their preexisting gene or group of genes and cause other genomic diseases that can be inherited by generations to come [1].

The consequences of weaponizing universal reactions of matter have very dangerous enhancing effects on human genomic diseases. In fact, utilizing weapons of universal reactions of matter in war can delete all forms of genomic-things including humans, all material wealth, science and technology we have from the surface of this planet within few hours. The key objective of this study is to confirm or to spectacularly demonstrate the fact that **Genome** is the only wonderful molecule that synthesizes all **genomic-things & itself** using their nutritive substances as raw materials in their compatible environment.

MATERIALS AND METHODS

Any structural or numerical change in the **Genome** is very clearly observed as a genomic disease in the person synthesized by that **Genome** with the change. Therefore, listing the genomic diseases as materials & methods including weaponizing universal reactions of matter and then dealing with them in an interpretive approach in **Results and Discussion** section had been taken to be the best option or procedure of design.

List of some genomic diseases (disorders) to serve as concrete evidences for the fact that Genome is the only synthesizer of all genomic-things:

1. Alpha-1 antitrypsin deficiency
2. Familial hypercholesterolemia
3. Fanconi anemia
4. Sickle cell anemia
5. Hemophilia
6. Cystic fibrosis
7. Polycystic kidney disease
8. Hereditary spherocytosis
9. Kartagener's syndrome
10. Rett syndrome
11. Maple syrup urine disease
12. Marfan syndrome
13. Galactosemia
14. Phenylketouria
15. Tay-Sachs disease\
16. Tuberous sclerosis
17. von Hippel-Lindau syndrome
18. Neurofibromatosis type 1
19. Xeroderma pigmentosum

20. Angelman syndrome
21. Cri du chat syndrome
22. Down, Edwards, Patau, Cri-du-chat, and Williams syndromes
23. Down syndrome, Klinefelter syndrome, Turner syndrome, and Holandric genes
24. Klinefelter (XXY) & Turner syndrome (Gonadal Dysgenesis)
25. Turner syndrome Peyton's story Cincinnati Children's

As it had been stated in the previous article entitled: "Dismissal of the fake term called Living-thing by Genomic-thing and universal reactions of matter," universal reactions of matter were categorized into three types namely:

1. **genomic reaction** (in genomic-things only),
2. **chemical reaction** (in nongenomic-things only outside nuclei of atoms), and
3. **nuclear reaction** (inside nuclei of atoms).

Each of the three types of universal reactions of matter is weaponizable for mass destruction of humans together with their economy and the entire environment. The weapons of universal reactions of matter not only used for horrifying killing of humans, the remains & fallouts of their reactions seriously increased genomic diseases in human populations, being causative agents for making human genome abnormal and they were the most dangerous pollutants of our environment. Having these facts in mind, methodology of this study had found that it was wise to bring genomic diseases & consequences of weaponizing universal reactions of matter together. How wise or valid it was to treat genomic diseases & weaponizing universal reactions of matter together, would be understood after going through videos of Figure 1 and Figure 2 in **Results and Discussion** section of this paper.

RESULTS AND DISCUSSION

Attending or watching the videos in Figure 1 herebelow including that of Figure 2 is a compulsory part of going through the contents of **Results and Discussion** section of this study.

Connect your computer to Internet.

(A)

Steps of opening the video: Select, copy and paste the title of the video (only the blue colored & underlined) on Google search space on your computer desktop screen and then press Enter Key of your computer keyboard. Click Video. Now, click the slide with the correct Title of video you pasted because when the video is copied & pasted, several other unwanted videos will appear together. When video 1 ends playing, repeat the same steps for playing of video 2, and then of video 3, etc.

Video 6: [The Dangers of Nuclear Weapons](#)

Video 7: [What Happened to the Nuclear Test Sites](#)

Figure 2: Videos of weapons of the three **Universal Reactions of Matter**.

Note:

The fake terms derived from the fake sciences of **Biology** including:

- ▶ Biochemistry (in Figure 1, video 12),
- ▶ Bioweapons (in Figure 2, video 1), and
- ▶ Biological weapons (in Figure 2, videos 2-4)

should correctly be termed as:

-Genomochemistry, Genomoweapons, and Genomological weapons respectively [2,3].

In sciences of Genomology, it has been repeatedly stated that the only wonderful molecule capable of self-replicating and synthesizing each & every individual in all species of genomic-things is the **Genome**. The genomic (i.e., genetic) change can range from minuscule (very small) to a major

size or from a discrete (separate) mutation in a single base (a point mutation) in a DNA molecule of a single gene to a gross (whole, massive, or entire) DNA molecule abnormality involving the addition or subtraction of an entire DNA or set of DNAs. Such changes in human Genome are equivalently reflected in what the human individual synthesized by that changed Genome looks like. In other words, any change in the **Genome** results in the equivalent change in the appearance (phenotype) of the individual synthesized by that **Genome** with abnormality. Structural or numerical change in the Genome results in change in the mechanisms of synthesizing human individuals and these consequential changes do equivalently appear in what the synthesized individuals look like. These scientific truths are spectacularly forwarded by videos in Figure 1. An **abnormal genome** due to unnatural changes in it, it synthesizes abnormal individuals, i.e., persons having **genomic diseases**. In other words, an **abnormal genome** synthesizes **abnormal individuals** whereas a **normal genome** synthesizes **normal individuals** as in a controlled experiment. All of these substantiated and concrete evidences in genomological sciences do confirm & re-confirm the fact that **Genome** is the only wonderful molecule that synthesizes itself and all individuals in all species of genomic-things including humans [4-9]. The sciences of Genomology have cleared & paved the way for further targetful research activities so that the best will be coming in the fields of both pure and applied sciences of Genomology [10, 11]. It must be understood that the potential number of kinds of both genomic diseases as well as that of causative changes is indefinite (unlimited or countably infinite) analogous to the potential countably infinite number of kinds of antibody (immunoglobulin) specificity to potential countably infinite number of kinds of foreign antigen found in the natural environment. With this actual reality in mind, note that the listed number of genomic diseases in this paper is not the only number of kinds of the human genomic diseases but a small number of randomly sampled demonstrative examples.

Genomological, chemical and nuclear weapons not only kill humans including all other genomic-things, they are also the most dangerous pollutants of our environment with their remains and fallouts of reaction. The remains & fallouts of weapons of the universal reactions of matter, are seriously toxic, can increase & cause genomic diseases or disorders by causing abnormalities in the human genome, and can also act as carcinogens, resulting in types of cancer by way of polluting our environment [12-14]. These evidential and actually observable realities of science have been demonstrated by impactive videos of Figure 2.

CONCLUSION

 **Genome** is the only thing (molecule) that synthesizes all genomic-things & itself and that is why when the genome becomes an **abnormal genome** due to abnormal changes in it, it synthesizes abnormal individuals, i.e., persons having **genomic diseases**.

 Number of potential kinds of changes (abnormalities) in genome and that of the genomic diseases resulting from it are countably infinite analogous to potentially infinite number of kinds of antibody (immunoglobulin) specific to potential countably infinite number of kinds of antigen found in the natural environment.

 Not only the undesirable genomic changes that result in genomic diseases are countably infinite in potential number of kinds, the desirable genomic changes in the normal human **Genome** are also countably infinite in potential number of kinds and that is the very reason for why each of the current 7.8 billion individuals, forming the total global human population is having distinctive individuality among whom no two persons are exactly alike except identical twins.

 Confirming what has been stated in one of the previous articles entitled, “Dismissal of the fake term called Living-thing by Genomic-thing and universal reactions of matter”:

- ▶ Super power in **Medical & Agricultural Sciences** in the entire world is **India** at present,
- ▶ Super power in **Economy** in the entire world is **USA** at present,
- ▶ Super power in **Nuclear Military Science** in the entire world is **Russia** at present, and
- ▶ Super power in **Power of Mind in Genomological Sciences** in the entire world with no rival & claimer is **Ethiopia** forever!!!!

Acknowledgements

I am deeply grateful to scientists acknowledged in the text and list of references of this paper for their providing me with confidential data that can be counterchecked, for their correctness, with observable facts in the natural environment as well as with truths in reputable journals, and Internet. This is so because science cannot develop without science. I am really thankful to authors of musical art & musicians for their carefully following and transforming my published articles of genomological sciences into musical films. I am very strongly thankful to those global scientific communities for their genuinely following my task of performing to establish the sciences of Genomology and for their authentic thanking me by way of emails for what I have contributed to the scientific world of Genomology. My thanks definitely go to genomologists who are involved in presenting video lessons of Figure 1 and Figure 2.
